Pennsauken, NJ

IPAK is pleased to announce the addition of 2 new digital presses, Hewlett Packard's Indigo Press 5500 and Xerox's Nuvera 288 with BDF inline stitcher. These presses will provide IPAK with the ability to produce an even wider range of digital solutions. "Essentially, we've added speed and quality," says President Karen Primak. The Indigo is an ink based press and most closely mirrors the quality of traditional offset printing with up to 1200 dots per inch. It can print over 1.5 million color pages or more than 5 million monochrome pages a month. The Nuvera 288 prints 288 duplexed k/k pages in one minute. With a yield of over 130,000 pages in just one 8 hour shift, it one of the fastest monochrome digital presses on the market. We are eager to utilize this new technology and see all of its capabilities."
